

Technology and Education

Principles of the Program

Editure promotes the embedding of I.C.T. into the teaching and learning culture of your school.

Student engagement, collaboration, critical thinking and inquiry are central to our professional development.

Technology in Education

Editure offers professional development aimed at assisting schools to become vibrant 21st century learning communities.

While schools are investing in technology - with interactive whiteboards, laptops, iPads and so on - access to technology is not enough. Schools have an unprecedented opportunity to re-think educational paradigms, the role of teachers, the allocation of resources and the learning environment.

Editure supports schools in the development of whole school ICT planning and provides the skills and strategies teachers require to meet the educational needs of students in the digital age.

Facilitator

Andrew Del Mastro is an experienced and engaging educator with global experience. He has worked in partnership with the Australian Education Union, the Catholic Education Office and Apple.

Andrew's sessions are fun and engaging. As a teacher himself he knows that professional development must be practical, rewarding and relevant. Andrew will leave your staff feeling energized and inspired, raring to introduce newly acquired skills into their teaching and learning.

Editure continues a near 20-year tradition of professional development services and we invite you to partner with us, envision the future, and take the steps towards a sustainable culture of digital innovation in your school.

Session	For those who.....	At the core	Exposure to
iPad Particulars	sense the times they are a changing.	What can "it" do? What can I do with "it"? This session will take you through implications and practical applications of introducing iPads into your teaching and learning.	Creating your own iBook that you can publish to the iPad.
